About the Authority

The National Health Performance Authority has been set up as an independent agency under the *National Health Reform Act 2011*. It commenced full operations in 2012.

Under the terms of the Act, the Authority will monitor, and report on, the performance of Local Hospital Networks, public and private hospitals, primary healthcare organisations and other bodies that provide healthcare services.

The Authority's reports will give all Australians access to timely and impartial information that fairly compares their local healthcare organisations against peer organisations and against national standards.

The reports will let people see, often for the first time, how their local healthcare organisations measure up against comparable organisations across Australia.

The Authority's activities are also guided by a document known as the *Performance and Accountability Framework* agreed by the Council of Australian Governments (COAG). The framework contains nearly 50 indicators that will form the basis for the Authority's performance reports.

The Authority publishes most performance data through the MyHospitals website, and releases reports on a quarterly basis. The Authority's role includes reporting on the performance of these healthcare organisations against the 48 measures in order to identify both high-performing Local Hospital Networks, Medicare Locals and hospitals (so effective practices can be shared), and Local Hospital Networks and Medicare Locals that perform poorly (so that steps can be taken to address problems).

The Authority consists of a Chairman, a Deputy Chairman and five other members, appointed for up to five years. Members of the Authority are:

- Ms Patricia Faulkner AO
(Chairman)
- Mr John Walsh AM
(Deputy Chairman)
- Dr David Filby PSM
- Prof Michael Reid
- Prof Bryant Stokes AM RFD
- Prof Paul Torzillo AM
- Prof Claire Jackson
(acting member)

The conclusions in this report are those of the Authority. No official endorsement from any Minister, department of health or healthcare organisation is intended or should be inferred.

Summary

The National Health Performance Authority was set up under the *National Health Reform Act 2011* as an independent body to provide locally relevant and nationally consistent information on the performance of healthcare organisations and health systems.

The Council of Australian Governments (COAG) agreed to a set of nearly 50 indicators that will be used by the Authority to report on the performance of hospitals and other health service providers. The Authority has chosen to focus this, its first report, on a subset of those indicators that relate to the performance of public hospitals and their emergency departments (EDs).

In particular, the report examines the extent to which patients depart public hospital EDs within four hours of arrival, following the introduction of the National Emergency Access Target (NEAT). Under the target, states and territories are expected to ensure that 90% of all patients presenting to public hospital EDs will depart within four hours by 2015.

This report is based on data from 134 major, large, medium and specialist public hospitals and about 5.9 million ED presentations. Hospitals were classified by location, and also classified as major, large or medium based on the number of ED presentations and hospital separations per year ([Table 1, page 2](#)).

In 2013 the Authority will publish reports each quarter on the comparable performance of healthcare organisations to stimulate improvements in the Australian health system, to increase transparency and accountability and to inform consumers.

Key findings

There were large variations in the proportion of patients seen within the four-hour target in 2011–12 ([Table 2, page 4](#)).

The report grouped public hospitals according to size (major, large and medium) and found big differences both between those peer groups, and between individual hospitals within the peer groups.

In terms of variation in performance between hospital peer groups:

- Major hospitals recorded the lowest percentage of patients who departed ED within four hours: **54%** in major metropolitan hospitals, and **63%** in major regional hospitals.
- Large hospitals (which are smaller than major hospitals) performed closer to the 2015 target: **67%** in large metropolitan hospitals and **78%** in large regional hospitals.

In terms of variation in performance between individual hospitals within the peer groups:

- Among all major hospitals, the percentage of patients departing ED within four hours ranged from **79%** to **33%**.
- Among large hospitals, the range was from **92%** to **48%**.
- Among medium hospitals, the range was from **93%** to **41%**.

Location of hospitals, as well as size, also influenced the percentage of patients seen within the target (Table 2, page 4).

- Metropolitan hospitals (both major and large) recorded lower percentages of all patients departing ED within four hours when compared with regional hospitals.
- Among major metropolitan hospitals, the percentage of patients departing ED within four hours ranged from **74%** to **33%**, and among major regional hospitals from **79%** to **47%**.
- Among large metropolitan hospitals, the percentage of patients departing ED within four hours ranged from **83%** to **48%**, and among large regional hospitals, from **92%** to **61%**.

A number of hospitals are already achieving the state targets, on the path to the introduction of the 2015 target (Figure 1, page 6).

The percentage of patients who leave ED within the four-hour target is much lower among those patients who are subsequently admitted to the same hospital, compared with patients who depart ED without being admitted (Figures 2 and 3, pages 9 and 10).

- Among major metropolitan hospitals, **26%** of admitted patients left ED within four hours, compared with **70%** of patients who were not admitted.

- The challenges of having admitted patients depart ED within four hours was felt across all the hospital peer groups studied. Peer performance ranged from **38%** of admitted patients departing ED within four hours in large regional hospitals, to **24%** in major regional hospitals.

The length of time within which 90% of admitted patients departed ED was shortest for medium hospitals and longest for large regional hospitals. The length of time ranged nationally from **5 hours and 28 minutes** to **27 hours and 59 minutes**. There is no national target for this measure (Table 3, page 4 and Figures 4 to 15, pages 11–23).

How well does your hospital perform?

The National Health Performance Authority has released new 2011–12 data on the MyHospitals website for over 400 hospitals, covering:

- Waiting times for elective surgery
- Waiting times for treatment in ED
- Time spent in ED from arrival to departure
- Presentations to ED
- Hand hygiene rates

To find more information about your local hospital go to www.myhospitals.gov.au

Introduction

About this report

This is the first report by the National Health Performance Authority. It reflects the Authority's decision to focus on a subset of specific indicators agreed by COAG that relate to the performance of public hospitals and their emergency departments, in recognition of the ED's crucial role at the interface of community and hospital care.

The report compares the performance of each hospital and its emergency department against its peers, after grouping them into categories based on size (major, large and medium hospitals) to ensure comparison is fair.

The information in this report is intended to provide the public, clinicians and public hospital managers with greater insight and context on how hospitals are performing. With this in mind, the report identifies the 10% of hospitals with the highest percentages of patients who leave ED within four hours, as well as the 10% with the lowest percentages (**Figure 1**).

However, in this report the Authority makes no determination that any particular hospital is performing either poorly or well. Hospitals have two more years to reach the 2015 target, and a number are already meeting it.

The definition of poor performance is likely to involve elements of comparison with targets and comparable hospitals, as well as performance over time.

The next report will focus on primary healthcare, and over time the Authority aims to build reports that examine hospital and primary care together.

The National Emergency Access Target (NEAT)

The National Emergency Access Target (NEAT) was agreed by COAG in 2011. States and territories have agreed varying annual targets for 2012, 2013 and 2014 for the percentage of patients who, after attending an ED, are admitted to the respective hospital, referred to another hospital, or discharged within the four-hour timeframe.

In 2012, the target ranges from **76%** in Western Australia to **64%** in the Australian Capital Territory, while in 2014 it varies from **85%** in Western Australia to **81%** in the Australian Capital Territory and Victoria.

COAG established an Expert Panel in May 2011 to provide recommendations on how NEAT might best be implemented. The panel noted the main goal of NEAT was to *'improve patient safety and quality of care by removing obstacles to patient flow that contribute to emergency department overcrowding'*.

The Expert Panel advised that NEAT should *'drive process and systemic change and [be] a measure against which to monitor progress'*¹

1. Expert Panel Review of Elective Surgery and Emergency Access Targets under the National Partnership Agreement on Improving Public Hospital Services, 30 June 2011.

The target reaches 90% nationally in 2015. It was not set at 100% as, in some circumstances, it is clinically appropriate for patients to stay in ED beyond four hours.

Fair comparisons: hospital peer groups

As part of its work, the Authority has developed new statistical methods to allow, for the first time, fair comparisons to be made between performance in different hospitals and peer groups of similar hospitals (**Table 1**).

Our analysis indicates the type of hospital influences performance more than the type of ED, as the reasons for delays in ED are likely to extend into other areas of the hospital or the wider primary healthcare setting.

Specialist hospitals are not similar to other hospitals or each other and are not compared.

Improving comparisons

In preparing this report the Authority began work on ways to correct for factors such as differences in patient types that might explain why some patients stay longer in ED. The Authority is aware further work is needed to fully support the comparability of data and notes small differences in measured performance may not represent true differences in care experiences.

Further information can be found in *Technical Supplement: Time patients spent in emergency departments 2011–12* and at www.myhospitals.gov.au

Report period

This report covers the period July 2011 to June 2012, and includes six months before the NEAT target commenced in January 2012. The next six-monthly report will cover July 2012 to December 2012.

Table 1: Hospital peer groups used to compare time spent in ED[#]

Major metropolitan hospitals	Metropolitan hospitals with >20,000 acute casemix-adjusted separations and >20,000 ED presentations per annum.
Major regional hospitals	Regional hospitals with >16,000 acute casemix-adjusted separations and >20,000 ED presentations per annum.
Large metropolitan hospitals	Metropolitan acute hospitals treating >10,000 acute casemix-adjusted separations and >20,000 ED presentations per annum.
Large regional hospitals	Large regional acute hospitals treating >8,000 acute casemix-adjusted separations and >20,000 ED presentations per annum.
Medium hospitals	Medium acute hospitals in metropolitan and regional areas treating between 5,000 and 10,000 acute casemix-adjusted separations and >20,000 ED presentations per annum.

^(#) More information on the peer group methodology is available in *Technical Supplement: Time patients spent in emergency departments 2011–12* at www.myhospitals.gov.au

Time in ED: differences between peer groups

In 2011–2012, there were approximately 5.9 million presentations to the 134 public hospital EDs included in this report.

These presentations accounted for the vast majority (90%) of the total ED presentations in the national data collection. Nearly one-third of these patients were admitted from ED to a ward in the same hospital.

Nationally there were large differences between hospital peer groups², and between hospitals within peer groups, in the length of time all patients spent in ED.

Major metropolitan and regional hospitals accounted for almost 4 million of the 5.9 million ED presentations in 2011–12 that are covered by this report, and had the lowest percentage of all patients departing within four hours of arrival.

Across major and large hospital groups, metropolitan hospitals had lower percentages than regional peer-grouped hospitals.

Large regional hospitals saw almost 395,000 ED presentations in 2011–12, and had the highest percentage departing within four hours.

There were also large differences between hospital peer groups, and between hospitals within peer groups, in the percentages of subsequently admitted patients who departed ED within four hours, and the percentage of discharged patients.

Percentage of *all patients* departing ED within four hours of arrival

In 2011–12 the percentage of all patients departing ED within four hours of arrival varied between peer groups:

- Major metropolitan hospitals: **54%**
 - Major regional hospitals: **63%**
 - Large metropolitan hospitals: **67%**
 - Large regional hospitals: **78%**
 - Medium hospitals: **76%**
- (Table 2 and Figure 1)

Time until most *admitted patients* (90%) departed ED

In 2011–12 the period of time until most patients (90%) departed ED for admission to a ward in the same hospital varied between and across peer groups:

- Major metropolitan hospitals: **14 hours and 59 minutes**
 - Major regional hospitals: **16 hours and 57 minutes**
 - Large metropolitan hospitals: **12 hours and 29 minutes**
 - Large regional hospitals: **12 hours and 24 minutes**
 - Medium hospitals: **12 hours and 15 minutes**
- (Table 3)

There is no national target for this measure.

2. Peer performance results are weighted averages calculated using presentation-level data for all hospitals in the group.

Table 2: Percentage of *all patients* departing ED within four hours of arrival, by peer group, 2011–12

	National peer performance (%)	Highest percentage in national peer group (%)	Lowest percentage in national peer group (%)
Major metropolitan hospitals	54	74	33
Major regional hospitals	63	79	47
Large metropolitan hospitals	67	83	48
Large regional hospitals	78	92	61
Medium hospitals	76	93	41

Table 3: Length of time in hours and minutes until most *admitted patients* (90%) departed ED, by peer group, 2011–12

	National peer performance (hr:min)	Shortest time in national peer group (hr:min)	Longest time in national peer group (hr:min)
Major metropolitan hospitals	14:59	8:24	27:24
Major regional hospitals	16:57	8:00	27:59
Large metropolitan hospitals	12:29	7:29	17:46
Large regional hospitals	12:24	5:28	20:14
Medium hospitals	12:15	6:23	19:13

Source: National Non-admitted Patient Emergency Department Care Collection Database 2011–12, data extracted 5 November 2012.

Time in ED: differences between hospitals within peer groups

In 2011–2012, as well as differences between peer groups, there were large differences nationally within hospital peer groups in the percentage of all patients departing public hospital EDs within four hours of arrival (**Figure 1**).

Importantly, each state and territory has an individual target for each calendar year to help it progress towards the 2015 NEAT, which sets a goal of 90% of all patients departing EDs within four hours (**Table 4**).

All patients departing ED within four hours of arrival

In 2011–12 the percentage of all patients departing ED within four hours of arrival varied across hospitals in each peer group:

- Major metropolitan hospitals:
from **74%** for Fremantle Hospital (WA) to **33%** for Princess Alexandra Hospital (QLD)
- Major regional hospitals:
from **79%** for Bunbury Hospital (WA) to **47%** for Lismore Hospital (NSW)
- Large metropolitan hospitals:
from **83%** for Rockingham Hospital (WA) to **48%** for Hornsby Ku-ring-gai Hospital (NSW)
- Large regional hospitals:
from **92%** for Albany Hospital (WA) to **61%** for Grafton Hospital (NSW)
- Medium hospitals:
from **93%** for Williamstown Hospital (VIC) to **41%** for Mount Drutt Hospital (NSW) (**Figure 1**).

Hospitals whose 2011–12 results against the four-hour NEAT were in either the top 10% or bottom 10% of their peer group nationally are displayed in **Figure 1**.

In this report the Authority makes no determination that any particular hospital is performing either poorly or well. Hospitals have more than two years to reach the 2015 target, and a number are already meeting it.

Figure 1 opposite sets out a summary of the performance of all hospitals for all patients (including those who were subsequently admitted and those who were discharged) who presented at public hospital EDs. It identifies those hospitals whose 2011–12 performance against the four-hour target placed them in either the top 10% or bottom 10% of their respective categories.

Specialist hospitals

Specialist hospitals are reported for each state and territory separately on **pages 11 to 23**. These hospitals are not similar to other hospitals or each other and are not compared.

How does my local hospital compare?

Presentations

Performance

- In **highest** 10% of peer group hospitals nationally
- Other hospitals (See results on pages 11–23)
- In **lowest** 10% of peer group hospitals nationally

Time in ED: differences between admitted and discharged patients

There were marked differences in results when comparing time spent in ED from arrival to departure for all patients, relative to patients admitted to a hospital ward from ED and those who were discharged from ED (**Figures 2 and 3**).

Admitted patients departing ED within four hours of arrival

Among major metropolitan and regional hospitals, the percentage of admitted patients who left ED within four hours (peer group performance) was **26%** and **24%** respectively.

In 2011–12, for patients admitted from ED to a ward in the same hospital, the percentage departing ED within four hours varied across hospitals in each peer group:

- Major metropolitan hospitals: from **55%** for Fremantle Hospital (WA) to **9%** for Wyong Hospital (NSW)
- Major regional hospitals: from **46%** for Bunbury Hospital (WA) and Warrnambool Hospital (VIC) to **12%** for Coffs Harbour Hospital (NSW)
- Large metropolitan hospitals: from **56%** for Swan District Hospital (WA) to **10%** for Shellharbour Hospital (NSW)
- Large regional hospitals: from **75%** for Albany Hospital (WA) to **18%** for Hervey Bay Hospital (QLD)
- Medium hospitals: from **65%** for Gympie Hospital (QLD) to **10%** for Belmont Hospital (NSW) (**Figure 2**).

Discharged patients departing ED within four hours of arrival

Across major metropolitan and regional hospitals the percentage of discharged patients who left ED within four hours (peer group performance) was **70%** and **78%** respectively.

In 2011–12, for patients discharged from ED, the percentage departing ED within four hours of arrival varied across hospitals in each peer group:

- Major metropolitan hospitals: from **91%** for Royal Perth Hospital (WA) to **45%** for Princess Alexandra Hospital (QLD)
- Major regional hospitals: from **91%** for Ballarat Hospital (VIC) to **66%** for Lismore Hospital (NSW) and Royal Darwin Hospital (NT)
- Large metropolitan hospitals: from **91%** for Sandringham Hospital (VIC) to **58%** for Hornsby Ku-ring-gai Hospital (NSW)
- Large regional hospitals: from **96%** for Wodonga Hospital (VIC) to **70%** for Grafton Hospital (NSW)
- Medium hospitals: from **97%** for Williamstown Hospital (VIC) to **51%** for Mount Druitt Hospital (NSW) (**Figure 3**).

Table 4: State and territory National Emergency Access Targets: percentage of *all patients* departing ED within four hours, 2012–2015

(#) Updated targets - Australian Government Department of Health and Ageing, email to NHPA, 7 December 2012; Departments of Health, Northern Territory and Victoria, emails to NHPA, 10 December 2012

The term *admitted* refers to patients who were admitted to a ward in the same hospital where they presented to ED, but excludes patients transferred to another hospital for admission.

The term *discharged* refers to all patients who presented to ED and were not subsequently admitted to the same hospital. This group includes patients who were discharged, transferred to another hospital for admission, left ED before commencement or completion of treatment, and those who died on arrival at, or in, ED.

Figures 2 and 3 provide comparisons of the progress of hospitals separately for patients who are subsequently admitted or not admitted to the hospital.

To ensure comparisons are fair, each figure compares hospitals against other hospitals that have been grouped together on the basis of similar size.

New South Wales

Time in ED from arrival to departure 2011–12

Percentage of **all patients** departing ED within four hours of arrival¹

The national target for 2015 is **90%** of all patients depart ED within four hours of arrival.

The New South Wales target for 2012 is **69%**.

For peer-grouped hospitals, the percentage of patients departing ED within four hours varied across New South Wales, ranging from **82%** at Broken Hill Hospital in the medium hospitals peer group to **36%** at Liverpool Hospital in the major metropolitan hospitals peer group.

Time until most **admitted patients** (90%) departed ED¹

In New South Wales' peer-grouped hospitals, the period of time until **most admitted** patients (90%) departed ED for admission to a ward in the same hospital ranged from **9 hours and 33 minutes** at Broken Hill Hospital in the medium hospitals peer group to **27 hours and 24 minutes** at Blacktown Hospital in the major metropolitan hospitals peer group.

Major regional hospitals¹

Hospital	Most admitted (hr:min)	Departed within four hours (%)
Coffs Harbour	21:16	55
Dubbo	20:17	58

Victoria

Time in ED from arrival to departure 2011–12

Percentage of **all patients** departing ED within four hours of arrival¹

The national target for 2015 is **90%** of all patients depart ED within four hours of arrival.
The Victorian target for 2012 is **70%**.

For peer-grouped hospitals, the percentage of patients departing ED within four hours varied across Victoria, ranging from **93%** at Williamstown Hospital in the medium hospitals peer group to **41%** at Western Hospital in the major metropolitan hospitals peer group.

Time until most **admitted patients** (90%) departed ED¹

In Victoria's peer-grouped hospitals, the period of time until **most admitted** patients (90%) departed ED for admission to a ward in the same hospital ranged from **7 hours and 28 minutes** at Williamstown Hospital in the medium hospitals peer group to **21 hours and 17 minutes** at Frankston Hospital in the major metropolitan hospitals peer group.

Acknowledgements

This report has benefited from advice from a number of individuals and organisations with interest and expertise in emergency care.

In particular the Authority received advice from its Jurisdictional Advisory Committee and consulted with:

- **Australasian College for Emergency Medicine (ACEM)**
 - Dr Andrew Gosbell, Director of Policy and Research, ACEM
 - Associate Professor David Mountain, Fellow, ACEM
 - Associate Professor Richard Paoloni, Faculty Chair, ACEM
- **Australian College of Emergency Nursing (ACEN)**
 - Linda Sims, Director of Finance, ACEN
 - Matthew Welfare, Board member, ACEN
- **College of Emergency Nursing Australasia (CENA)**
 - Matthew Conaghty, Board Director, CENA
 - Shane Lenson, Administrative Director, CENA
- **Consumers Health Forum of Australia**
 - Carol Bennett, Chief Executive Officer
 - Anna Greenwood, Senior Policy Manager
 - Jo Talbot, Project and Policy Officer

- **Expert Panel on the implementation of the elective surgery and emergency access targets under the National Partnership Agreement on Improving Public Hospital Services**
 - Professor Chris Baggoley, Chair
 - Dr Mark Monaghan, Panel member.
- **New South Wales Emergency Care Institute (ECI)**
 - Dr Sally McCarthy, Medical Director, ECI
 - Dr Trevor Chan, Director of Emergency, St George Hospital
 - Dr Matthew Vukasovic, Director of Emergency, Westmead Hospital

The Authority acknowledges the Australian Institute of Health and Welfare for its role in establishing the MyHospitals website.

This report relies on data provided by state and territory governments. These data were used to calculate the performance measures in this report. The Authority does a number of checks to ensure data quality, and also relies on the data quality work of AIHW done under contract to the Authority. The Authority provides jurisdictions with the opportunity to verify their data.

Thanks are extended to all those who contributed.
