Acknowledgments

This report was prepared by Anne Marie Thow. Funding from the Australian Government Department of Health and Ageing contributed to the production of this report. Valuable comments were received from Caroline Arthur, Michelle Coad, Joy Eshpeter, Jessica Fruin and others in the Department of Health and Ageing, and Jane Kellett of the University of Canberra. Completion of the report would not have been possible without generous assistance from Dr Katrine Baghurst of the NHMRC Health Advisory Committee regarding presentation and interpretation of the nutrient reference values. From within the AIHW, the input from Ilona Brockway, Mark Cooper-Stanbury and Robert van der Hoek is greatly appreciated.

Highlights

- This report compiles existing nutritional data for children and adolescents relevant to the dietary guidelines. These analyses form a baseline in preparation for the results of Kids Eat, Kids Play (KEKP) – a national children’s nutrition and physical activity survey which commenced in February 2007.
- Recent data suggest that some concerning behaviours are evident – in 2004–05, only one-quarter of adolescents reported usually eating the recommended three serves of fruit per day, and less than one-third the recommended four serves of vegetables. Less recent data suggests that children and adolescents are eating too much fat and sugar.
- Positive trends in breastfeeding rates appear to be continuing; 88% of children aged 3 years and under had ever been breastfed in 2004–05.
- The majority of children were consuming sufficient iron, calcium and zinc in 1995, when data are compared with the new nutrient reference values. However, for the older age groups, more than half had inadequate intakes of calcium, a high proportion of older males had inadequate zinc intakes, and more than 30% of older females had inadequate iron intakes.
- Relying on 1995 data for preparing baseline measures, this report highlights the lack of recent data on children’s nutritional status. The KEKP study will largely fill this gap.
