

Glossary

Admission day

The first day of a person's stay in an aged care service. In the case of a person transferring between services, where the time between leaving one service and entering another is less than 2 days, it is the date of the initial admission. Permanent and respite admissions are treated separately. For example, if a person transfers from a respite stay to a permanent stay, a new permanent admission is created.

Aged Care Assessment Team (ACAT)

A multidisciplinary team of health professionals responsible for determining eligibility for entry to residential aged care.

Care recipient

A person assessed by an Aged Care Assessment Team as having significant care needs which can be appropriately met through the provision of residential care, community care, and/or flexible care.

High care residents

A high care resident is one who is assigned to classification levels 1–4 using the Resident Classification Scale. The level of care required is broadly equivalent to the nursing home care provided under the previous system of residential care.

Hostel for the aged

A hostel is a care service in which residents receive hostel care or personal care services unless designated as a co-habitee. In this publication all references to hostels are to hostels for the aged, that is, those hostels designed to provide services to older people. A small number of young people with disabilities live in hostels for the aged. Hostels specifically established for young people with a disability are not included in this publication. Following the introduction of the *Aged Care Act 1997* hostels no longer exist as legal entities. Current practice in the Department of Health and Ageing is to refer to both former nursing homes and former hostels as 'aged care services'.

Length of stay

The length of stay of a separated resident is based upon the time between the date of admission and the date of separation. For a current resident, it is the time between the date of admission and 30 June 2002. The admission day and the specified day (30 June 2002) are included but the separation day is excluded from the calculation of length of stay.

Low care residents

A low care resident is one who is assigned to classification levels 5–8 using the Resident Classification Scale. The level of care required is broadly equivalent to the hostel level of care provided under the previous system of residential care.

Nursing home for the aged

These include all nursing homes approved under the National Health Act other than nursing homes for disabled people. In this publication all references to nursing homes are to nursing homes for the aged. There has been a small number of young people with disabilities living in nursing homes for the aged. Following the introduction of the *Aged Care Act 1997* nursing homes no longer exist as legal entities. Current practice in the Department of Health and Ageing is to refer to both former nursing homes and former hostels as 'aged care services'.

Permanent admission

A permanent admission is an admission to residential aged care for probable long-term care purposes.

Permanent care

A resident in residential aged care is under permanent care if this resident entered the service as a permanent admission.

Permanent resident

A resident who is admitted to residential aged care for permanent care (long-term care).

Personal Care Assessment Instrument (PCAI)

The PCAI was forwarded under the previous system of residential care to Commonwealth offices in states and territories by hostels for each resident who may have been eligible for a personal care subsidy. On the basis of the information provided, residents were assigned to one of three service-need categories for the purpose of funding. The three categories were Personal Care High (PCH), Personal Care Intermediate (PCI) and Personal Care Low (PCL). The PCAI categories were used in previous reports in this series to measure the level of dependency based on the assumption that the level of dependency positively relates to the level of care needs. This classification system has been replaced by the Resident Classification Scale (RCS) (see below).

Place-day

A place-day is a day on which a care recipient is occupying a place. The day that a care recipient enters residential aged care and the day he or she leaves are counted as one day.

Remoteness

The remoteness classification used in this report is based on the Australian Standard Geographical Classification Remoteness Structure developed by the Australian Bureau of Statistics. This categorises all Census Collection Districts (CDs) in Australia according to their remoteness, based on physical road distance to the nearest urban centre. Remoteness is measured by the Accessibility/Remoteness Index of Australia (ARIA) (ABS 2001). The structure of the classification is as follows:

| | |
|-----------------------|--|
| <i>Major cities</i> | CDs with an average ARIA index value of 0 to 0.2 |
| <i>Inner regional</i> | CDs with an average ARIA index value greater than 0.2 and less than or equal to 2.4 |
| <i>Outer regional</i> | CDs with an average ARIA index value greater than 2.4 and less than or equal to 5.92 |

| | |
|--------------------|--|
| <i>Remote</i> | CDs with an average ARIA index value greater than 5.92 and less than or equal to 10.53 |
| <i>Very remote</i> | CDs with an average ARIA index value greater than 10.53 |

Resident

A resident is a person who has been assessed by an Aged Care Assessment Team as requiring residential care and who resides in a Commonwealth-funded aged care service.

Resident Classification Instrument (RCI)

The RCI was, under the previous system, forwarded to Commonwealth state offices by nursing homes for each resident admitted. On the basis of the information provided, residents were assigned to one of five service-need categories for the purpose of funding. Category 1 represented the highest level of care needs and category 5 the lowest. The RCI categories were used in previous reports in this series to measure the level of dependency based on the assumption that the level of dependency positively relates to the level of care needs. This classification system has been replaced by the RCS (see below).

Resident Classification Scale (RCS)

The RCS is an instrument which assesses a care recipient's care needs. This scale has 8 classification levels ranging from low care (RCS 8) to high care (RCS 1), with each level having a specified subsidy level which is paid to the provider for providing the required care to the care recipient. The RCS was introduced with the amalgamation of hostels and nursing homes into one system of care on 1 October 1997, replacing the RCI (nursing homes) and the PCAI (hostels).

Residential aged care service

A service which consists of a number of approved places at a specific location.

Residential care

Personal and/or nursing care that is provided to a person in a residential care service in which the person is also provided with accommodation that includes appropriate staffing, meals, cleaning services, and furnishings, furniture and equipment, for the provision of that care and accommodation.

Respite admission

A respite admission is a short-term admission to residential aged care for respite care purposes.

Respite care

Respite care is care given as an alternative care arrangement with the primary purpose of giving the carer or a care recipient a short-term break from their usual care arrangement.

Respite resident

A respite resident is one who is admitted to residential aged care for respite care.

Separation

A separation occurs when a person is discharged from residential aged care and has not re-entered the same or another service within 2 days.

Separation day

A separation day is the last day of a person's stay in an aged care service; the day on which the person leaves the service. In the case of a person transferring between services, where the time between leaving one service and entering another is less than 2 days, this is not viewed as a separation.

Separation mode

The separation mode indicates the destination of a resident at separation, including death.

SPARC

The System for the Payment of Aged Residential Care (SPARC) is the current payment system for residential aged care.

Transfer

A transfer occurs where a person leaves an aged care service on one day and is admitted to another within 2 days.

Usual housing status

Usual housing status refers to housing tenure prior to the resident's application for admission to residential aged care.
