Acknowledgments

This report was compiled by the Housing Assistance Unit of the Australian Institute of Health and Welfare. Data were provided by all states and jurisdictions under the National Housing Data Agreement, a subsidiary agreement to the 2003 Commonwealth–State Housing Agreement. The authors would like to thank the National Housing Data Agreement Management Group for their direction in preparing this information paper, and the National Housing Data Agreement Data Development Committee for their technical input and comments.

Members of the Housing Assistance Unit that processed the data to produce the housing National Minimum Data Set and prepared this information paper were Anne Aisbett, John Kiely and Janice Miller.

1 Introduction

1.1 Overview

This document outlines the data available in the 2004–05 public rental housing and state owned and managed Indigenous housing national minimum data set (NMDS) developed by the Australian Institute of Health and Welfare (AIHW). It sets out the technical specifications and major conventions for handling data (e.g. codes, business rules, data relationships and formats). It attempts to ensure that users of the NMDS will interpret and analyse data items consistently with the *National housing assistance data dictionary* version 2 (NHADDv2), which sets out the agreed data definitions, classifications and standards for information collected under the Commonwealth–State Housing Agreement (CSHA).

An NMDS is a minimum set of data elements agreed for mandatory collection and reporting at a national level. The housing NMDS provided is a subset of data obtained from the CSHA public rental housing and state owned and managed Indigenous housing annual data collections. The collections have been driven by the National Housing Data Agreement framework that sets out data standards for housing data and a core set of nationally consistent performance indicators for benchmarking.

1.2 Construction of the NMDS

Generally, each jurisdiction supplied the AIHW with six files containing information on dwellings (Dwelling), vacancy episodes (Dwelling history), households (Household), persons (Person), person incomes (Person income) and waitlists (Waitlist).

These files are stored as part of the National Housing Data Repository at the AIHW.

This document specifically excludes details about the raw files received from each jurisdiction and the data cleansing and standardisation process. Figure 1 illustrates the steps carried out in constructing the housing NMDS.

Step 1

Examine the availability of data items in data sets supplied by state/territory departments as part of the National Housing Data Repository.

Step 2

Standardise any variation in the data supplied to conform to specifications in the *National housing assistance data dictionary* (data item naming, format, type, length, coding values, etc.).

Step 3

Perform data validation to check for errors. The data are cleaned where necessary, in consultation with state/territory departments.

Step 4

Determine which data items are to be included in the NMDS. Only items that are available consistently across jurisdictions are eligible for inclusion. Items are then judged on the basis of robustness and relevance to key performance indicators.

Step 5

Produce a guide for users of the housing NMDS.

Figure 1: Construction of the housing NMDS

1.3 Scope of the NMDS

Information from the Dwelling history and Waitlist files supplied by jurisdictions relating to the 2004–05 public rental housing and state owned and managed Indigenous housing data collections used to create the four files that form the housing NMDS are:

- Dwelling—containing information relevant to dwellings
- Household—containing information relevant to households within dwellings. Each occupied dwelling should have at least one household record
- Person—containing information relevant to persons within households and income units. Each occupied dwelling and each household should have at least one person record
- Person income—containing information relevant to persons within households and income units. Each person may have multiple income sources and thus records.

These four files have been standardised, validated and amalgamated to a national level.

Available administrative housing data vary widely across jurisdictions, and the NMDS has been limited to a set of core data items. These data items are considered essential to produce comparable national information on key housing issues reflected in performance indicator reporting. The designed database contains some AIHW-derived data items based on jurisdiction-provided data, such as number of occupants or gross household income. Derived elements are data that are not collected directly or at the aggregated level required, but can be calculated or derived from other information specified for collection.

1.4 Reporting period

As the reporting period for all jurisdictions is on a financial year basis, most data items are collected as a snapshot as at 30 June. However, there are also some data items that are only applicable to the reported financial year, such as new allocation status.

1.5 Privacy issues and conditions of use

The *Privacy Act 1998* governs the conduct of Commonwealth agencies in their collection, management and use of data containing personal information. Researchers granted access to identifiable information must sign an undertaking that binds them to the confidentiality provisions of the *Australian Institute of Health and Welfare Act 1987*.

The NMDS contains files of unidentifiable unit record data. Data contributors (state/territory housing authorities), government departments, AIHW, research organisations and individuals can access the NMDS. Any users of the NMDS must abide by the nationally agreed protocols on the conditions of use, including the agreements of data providers to release the data for each specified request.

Enquiries regarding identifiable information or other items that may be available and not included in the NMDS should be forwarded to the housing data custodian on (02) 6244 1202 or by emailing housing@aihw.gov.au.

1.6 Changes to the 2004–05 NMDS

New variables

Several additional variables have been included on the Household file for 2004–05. They are:

- Household type (HTYPE): the type of tenancy household, based on the relationships between household members
- Greatest need status (GRT_NEED): a code indicating households in greatest need at the time of housing allocation.

These variables are documented in Section 2.4 and, where appropriate, in Appendix B.

Enquiries regarding the new variables on the NMDS should be forwarded to the housing data custodian on (02) 6244 1202 or by emailing housing@aihw.gov.au.

Other changes

- In previous years, counts of low income households excluded households reporting zero amount of income. In 2004–05 these households are included in the low income measures.
- In previous years, age of person and main tenant was coded to '.' if missing. In 2004–05 age of person and main tenant was coded to '999' as specified in the NHADDv2.

1.7 Future developments of the housing NMDS

This is the fifth release of an NMDS under the Commonwealth–State Housing Agreement and, as such, is limited in coverage and scope.

Further refinements and developments after consultation with stakeholders are envisaged for future versions. For example, AIHW is currently developing a way of constructing nationally consistent income unit-based record files that currently only three jurisdictions are able to provide. Development of potential data elements will be conducted with the aim of increasing the quality and scope of the data collected in the data repository process.

- Information on the protocols and the application forms are available on the AIHW website at < <http://www.aihw.gov.au/housing/agreements/repository/>>.

2 Data specifications

This section describes in detail the data items included in the NMDS. It firstly gives a general overview of housing concepts, followed by data set contents and then detailed data specifications.

2.1 Housing data concepts

A *dwelling* is a structure or a discrete space within a structure intended for people to live in or where a person or group of people lives.

Occupying this dwelling is a *household* comprising one or more persons. A separate household ID is assigned to each tenancy agreement, which is a formal agreement between a household (a person or a group of persons) and a housing provider.

Another grouping within the household concept is *income unit*. An income unit consists of a single person or a group of related persons within a household whose command over income is shared.

A *household receiving assistance* is any household that is housed within the public rental housing and state owned and managed Indigenous housing programs. The household may or may not be in receipt of a rebate. A rebated household is one whose rent is less than the market rent value of the dwelling. This implies that tenants under these programs would face additional rental costs if they rented an equivalent dwelling in the private rental market.

Appendix A consists of diagrams that represent these concepts.

Appendix B contains a comprehensive list of data elements and their definitions.

Table 1 contains a list of the items selected for inclusion in the NMDS from the public rental housing and state owned and managed Indigenous housing data collections.

Table 1: Data set record content

Dwelling	Household	Person	Person income
<i>State/territory ID</i>	<i>State/territory ID</i>	<i>State/territory ID</i>	<i>State/territory ID</i>
<i>Program type</i>	<i>Program type</i>	<i>Program type</i>	<i>Program type</i>
<i>Dwelling ID</i>	<i>Dwelling ID</i>		
	<i>Household ID</i>	<i>Household ID</i>	<i>Household ID</i>

	Income source (main tenant)		
	Principal income source (household)		
	Household type		
	Tenancy composition		
	Greatest need status		
	Special needs status		

Note: Items in italic are linkage keys.

2.2 Code mapping

The codes used in the housing NMDS are consistent with the *National housing assistance data dictionary* version 2 (NHADDv2).

Jurisdiction data items and values have been renamed and recoded to follow the data dictionary as closely as possible. NMDS coding practices have attempted to take into account variations in jurisdictional information-management systems and definitions. Some data items could not be obtained directly from the data provided and have been derived.

There are incidences where complete information may not be available for all records and is thus recorded as missing. Missing data may arise where:

- jurisdictions are able to collect the data but the information is unknown or not available at unit-record level
- jurisdictions do not collect any information on an item.

If the field is numeric, a missing value is displayed as '.', while a character field is left blank. The exceptions are age and age of main tenant, where a missing value is coded to '999' in accordance with the NHADDv2.

2.3 File overview and linkages

There are four data files contained in the 2004–05 NMDS. All files are available as SAS (version 8 or version 9) files and as text files with comma or tab delimiters.

The variables used to link records between the NMDS data files are as follows:

1. Dwelling data and Household data are linked by *State/territory ID*, *Program type* and *Dwelling ID*.
2. Household, Person and Person income data are linked by *State/territory ID*, *Program type* and *Household ID*.
3. Person data and Person income data are linked by *State/territory ID*, *Program type* and *Person ID*.

All unique identifiers, including *Dwelling ID*, *Household ID*, *Person ID* and *Income unit ID*, have been modified from those supplied by jurisdictions in order to preserve confidentiality of the data. The modification of IDs is consistent from year to year; therefore it is possible to link data items from different years.

The Dwelling file

The Dwelling file contains current housing stock that, as at the end of the financial year, each jurisdiction manages, excluding those that have been sold, demolished or transferred for another purpose. Public housing and state owned and managed Indigenous housing rental properties leased to other program areas such as community housing are excluded.

Some profile information on the dwelling stock available in this file include the number of bedrooms within the dwelling, the structure type of the dwelling, and whether or not the dwelling is occupied and/or tenantable for habitation.

Each *Dwelling ID* for a given state and program type has a unique record in the data set.

The Household file

The Household file contains information on tenancies that:

- are currently receiving assistance; or
- received assistance within the financial year and have since ceased occupation of their dwelling.

In South Australia the household identifier remains the same when tenancy circumstances change due to transfer or mutual exchange. In the case where household members separate, the household identifier would stay with the principal tenant. In all the other jurisdictions a transfer or mutual exchange would result in the creation of a new household identifier, making tracking of a household more difficult.

Each *Household ID* for a given state and program type has one record in the data set.

Some variables such as household disability flag may be derived from the Person file. For instance, if any person within the household has a disability, the disability flag at the household level is positive. Similarly, if any person's disability status is unknown and there is no person identified as disabled, the disability flag at the household level is unknown.

Public rental housing and state owned and managed Indigenous housing tenants usually pay a percentage of their income in rent, which is determined by the state or territory housing authority. The rent charged to the household is generally lower than the actual market rent of the dwelling being occupied. This rebate assistance amount can generally be calculated by deducting rent charged from market rent and is applicable where the rebate status flag is positive.

The Person file

The Person file contains details of persons within households as at 30 June. Demographic characteristics that can be obtained from this file include age, sex and Indigenous and disability status. Information on people of non-rebated households or tenants of households with a period of assistance completed before 30 June may not always be available, up to date or complete.

Each person has a *Person ID* attached to a *Household ID*. Each person's relationship within the household is represented by the Relationship within household data item. The main tenant is identified as the reference person/principal tenant and is generally the first person listed on the housing assistance tenancy agreement.

Generally each *Person ID* for a given state and program type has one record in the data set. However, in some circumstances more than one *Person ID* may exist, for instance children may reside in two households at once.

The Person income file

The Person income file contains details of weekly income sources and amounts received by persons within households as recorded at 30 June. The Person income file contains a separate record for each income source received by each person, and therefore may contain multiple records per *Person ID*. Each record details an income amount (gross and/or assessable) and income source code.

The main income sources for people being assisted in the public rental housing and state owned and managed Indigenous housing programs are government pensions and benefits. Each jurisdiction's income codes have been grouped into major categories of income source.

As mentioned above, income records for persons of non-rebated households or tenants of households with end dates before 30 June may not always be available, up to date or complete.

2.4 Data formats

The NMDS data items, including some derived data items, contained in each file and their descriptions are listed in tables 2 to 5.

Table 2: Dwelling data set: formats and values

Variable	NHADDv2 item	Data type	Field size in SAS	Data values and comments
STATE	State/territory ID	Numeric	3	1. NSW 2. Vic 3. Qld 4. SA 5. WA 6. Tas 7. NT 8. ACT
PROGRAM	Program type	Numeric	3	1. Public rental housing 3. State owned and managed Indigenous housing

REBATE	Rebated household (flag)	Numeric	3	1. Rebated 2. Not rebated 9. Not stated/inadequately described
REBATAMT	. .	Numeric	\$\$\$\$\$.cc	Rebate amount of household at 30 June (generally the positive difference between market rent of property and rent charged)
INC_GH	Income—gross (household)	Numeric	\$\$\$\$\$.cc	Weekly gross income at 30 June
INC_AH	Income—assessable	Numeric	\$\$\$\$\$.cc	Weekly assessable income at 30 June

(continued)

Table 3 (continued): Household data set: formats and values

Variable	NHADDv2 item	Data type	Field size in SAS	Data values and comments
INDIG_H	Indigenous household	Numeric	3	<p>1. Indigenous person/s present in household</p> <p>2. No Indigenous person/s present in household</p> <p>9. Not stated/inadequately described</p> <p>Indigenous status as at 30 June</p> <p>Derived from Person file if not supplied by jurisdiction. If any member within a household satisfies the jurisdiction's Indigenous status definition, then a household is assigned an Indigenous flag. If there is no identified Indigenous member but one or more member's Indigenous status is unknown, the household flag is unknown.</p>
DIS_H	Disability household	Numeric	3	<p>1. Person/s with a disability present in household</p> <p>2. No person/s with a disability present in household</p> <p>9. Not stated/inadequately described</p> <p>Disability status as at 30 June</p> <p>Derived from Person file if not supplied by jurisdiction. If any member within a household satisfies the jurisdiction's disability status definition, then a household is assigned a disability flag. If there is no identified disabled member but one or more member's disability status is unknown, the household flag is unknown.</p>
OCCS	..	Numeric	8	Number of persons in household at 30 June
AGE_MT	Age	Numeric	3	<p>The age of the main tenant at 30 June in completed years</p> <p>The main tenant is usually the household reference person. If there is no identified reference person, then this item is set to missing. If there is more than one reference person in the household, then the age of the oldest is used.</p> <p>Coded to '999' if missing.</p>
INCS_MT	Income source	Numeric	8	<p>The principal income source of the main tenant:</p> <p>1. Wages/salary</p> <p>2.1. Disability pension</p> <p>2.2. Aged pension</p> <p>2.3. Unemployment benefit</p> <p>2.4. Other government pension/benefit, e.g. youth allowance, service pension</p> <p>3. Other (superannuation/compensation)</p> <p>4. Nil income</p> <p>9. Not stated/inadequately described</p> <p>The main tenant is usually the household reference person. If there is no identified reference person, then this item is set to missing. If there is more than one reference person in the household, then the principal income source of the oldest reference person is reported.</p>

(continued)

Table 3 (continued): Household data set: formats and values

Variable	NHADDv2 item	Data type	Field size in SAS	Data values and comments
INCS_H	Income source	Numeric	8	The principal income source of the household: 1. Wages/salary 2.1. Disability pension 2.2. Aged pension 2.3. Unemployment benefit 2.4. Other government pension/benefit, e.g. youth allowance, service pension 3. Other (superannuation/compensation) 4. Nil income 9. Not stated/inadequately described
HTYPE	..	Numeric	8	The type of household: 1. Single family 2. Group (unrelated adults) 3. Mixed composition household 9. Not stated/inadequately described
TENCOMP	..	Numeric	8	The composition of the tenancy household: 1.1 Single (person living alone) 1.2 Couple only 1.3 Sole parent with child/ren (any age) 1.4 Couple with child/ren (any age) 1.5 Other single income unit 2. Group (unrelated adults) 3. Mixed composition household 9. Not stated/inadequately described
GRT_NEED	Greatest need status	Numeric	3	The greatest need status of the household at the time of housing allocation: 1. Greatest need household 2. Not greatest need household 3. Not stated/inadequately described
SPECNEED	Special needs status	Numeric	3	The special needs status of the household, derived from the disability household and Indigenous household flags and the age of the main tenant: 1. Special needs household 2. Not special needs household 9. Not stated/inadequately described For New South Wales other locally available information may also be taken into account when deriving Special needs status.

.. Not applicable.

Table 4: Person data set: formats and values

Variable	NHADDv2 item	Data type	Field size in SAS	Data values and comments
STATE	State/territory ID	Numeric	3	1. NSW 2. Vic 3. Qld 4. SA 5. WA 6. Tas 7. NT 8. ACT
PROGRAM	Program type	Numeric	3	1. Public rental housing 3. State owned and managed Indigenous housing
HOUSEID	Household ID	Alpha-numeric	15	De-identified
PERSONID	Person ID	Alpha-numeric	15	De-identified
INCOMEID	Income unit ID	Alpha-numeric	15	De-identified Only available for Queensland and Victoria
SEX	Sex	Numeric	3	1. Male 2. Female 9. Not stated/inadequately described
AGE	Age	Numeric	3	Occupant's age at 30 June in completed years Coded to '999' if missing.
DIS_P	Disability status	Numeric	3	1. Person has a disability 2. Person does not have a disability 9. Not stated/inadequately described Status as at 30 June
INDIG_P	Indigenous status	Numeric	3	1. Indigenous 2. Neither Aboriginal or Torres Strait Islander origin 9. Not stated/inadequately described Status as at 30 June

2.6 Data limitations and problems

Variations in the public rental housing and state owned and managed Indigenous housing program policies, administration of programs and reporting capabilities of information management systems between jurisdictions have influenced the data quality and results. This document recognises that there are data limitations and/or integrity issues associated with data provided, and highlights the importance of data quality and consistency between jurisdictions. Any interpretation of results should take account of the data qualifications noted in the following sections.

The areas of concern identified are both general and technical in nature.

2.6.1 General areas of concern

Some data items may not have been updated in systems since first being recorded by jurisdictions and therefore are no longer current. For example, a household with an Indigenous flag may have contained an Indigenous occupant who has since left. Most jurisdictions do not regularly update information about households that are not rebated.

Dwelling

- Because of the complexity of funding arrangements in the Indigenous housing sector, some community-managed dwellings (whether government-owned or community-owned) may be included in state owned and managed Indigenous housing reporting in some jurisdictions.
- Some jurisdictions may place a household funded under one program type into a dwelling managed under another program type.
- A dwelling may be leased to another program for only part of the financial year.

Household

- Some variables supplied by jurisdictions at the household level (for example gross household income and disability or Indigenous status) may not correspond to the details for that household in the Person or Person income file.
- A rebated household should receive a positive subsidy difference between market rent and the rent charged to it. However, this may not always be the case. For example, some jurisdictions calculate rental subsidies on a concept of full rent rather than market rent. Full rent is determined by the state housing authority and is used as a proxy to market rent but may be above or below the market value. Cases of a calculated rebate amount of zero or less are actually correct by jurisdictional systems.
- Households that were both newly allocated and transferred in the same financial year are excluded from the transfer count reported for some jurisdictions.
- Some jurisdictions were not able to supply information on households that ceased receiving assistance during the financial year, unless they had also been newly allocated during this time.

Person

- In New South Wales, for tenancies commencing before November 1999, information on sex, age, disability status and Indigenous status is less complete than for those commencing after this date.
- There is generally one main tenant per household but some jurisdictions may record more than one or no main tenants.
- Indigenous status of households is generally determined by the applicant's self-identification at the time of application. There is also some variation in how Indigenous status is recorded in jurisdictions' information management systems, especially if the Indigenous status of the household is unknown.

2.6.2 Technical data problems

Some jurisdictions may record only a 'yes' or blank in a field, for example Indigenous status. A blank is deemed 'unknown'.

Dwelling

- Some occupied dwellings may have one or more of the following characteristics: zero market rent, dwelling indicated as untenable, or no corresponding household in the Household file.
- Many unoccupied dwellings have missing rent or zero market rent.

Household

- Some ongoing households may have one or more of the following characteristics: missing rebate status; missing rent or zero market rent; zero or unrealistic rent charge amounts; resident in a dwelling indicated as vacant in the Dwelling file; or no corresponding dwelling in the Dwelling file.
- Some ongoing rebated households may have missing, zero or unrealistic amounts for gross income, market rent and rent charged.
- Some households flagged as rebated have rent charged greater than or equal to market rent (where market rent and rent charged are not missing or zero), and vice versa with non-rebated households.
- Some households in New South Wales with a couple and one or more other adults are characterised as a group tenancy.

Person

- There may be person records with unrealistic age values that do not correspond to their relationship code within the household.

Person income

- There are some missing values for income source and/or income amount.
- Income amounts are as originally supplied by jurisdictions, with some incidence of extreme income values.

These are, to the best of our knowledge, the limitations and problems of the housing NMDS. Enquiries regarding the NMDS should be forwarded to the housing data custodian on (02) 6244 1202 or by emailing housing@aihw.gov.au.

3 Summary statistics

Tables 10 to 12 provide a summary of public rental housing and state owned and managed Indigenous housing records by jurisdiction and selected public rental housing and state owned and managed Indigenous housing statistics.

Table 10: Summary of public rental housing records and statistics by jurisdiction

Program type 1	NSW	Vic	Qld	SA	WA	Tas	NT	ACT	Total

(a) Data in this table are based on all records in the Household file. This file contains both ongoing households and new households who ceased receiving housing assistance in the year ending 30 June 2005.

Appendix A: Housing concept diagram

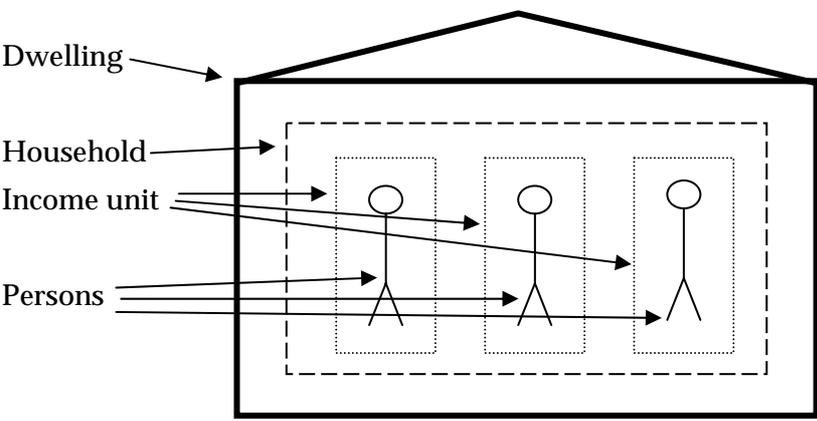

Dwelling A: Single household, single-income unit

Dwelling B: Multiple household, multiple-income units

Dwelling C: Group household, multiple-income units

Appendix B: Data definitions

Detailed data definitions for the data elements of the housing NMDS are published in the *National housing assistance data dictionary* version 2 (AIHW 2003) and on METeOR at <<http://meteor.aihw.gov.au>>. Extracts for the following concepts and variables have been included in the following pages.

NHADDv2 item	NMDS variable
Age	AGE
Date assistance commenced	DT_START
Date assistance completed	DT_END
Disability household	DIS_H
Disability status	DIS_P
Dwelling	..
Dwelling ID	DWELID
Dwelling occupancy status	OCCSTAT
Dwelling structure	DWELTYPE
Dwelling tenability status	TENSTAT
Greatest need status	GRT_NEED
Household	..
Household ID	HOUSEID
Income—assessable	INC_AH, INC_AP
Income—gross (household)	INC_GH
Income—gross (person)	INC_GP
Income source	INC_CODE
Income unit	..
Income unit ID	INCOMEID
Indigenous household	INDIG_H
Indigenous status	INDIG_P
Market rent value of dwelling	RNT_MRKT
New allocation status	NEWALLOC
Number of bedrooms	NBEDROOM
Person ID	PERSONID
Program type	PROGRAM
Rebated household (flag)	REBATE
Reference person	..
Relationship to reference person	REL_H
Relationship within income unit	REL_I
Rent charged to tenant	RNT_CHRG
Sex	SEX

(continued)

NHADDv2 item	NMDS variable
Special needs status	SPECNEED
State/territory ID	STATE
Transfer status	TRANSFER

.. Not applicable.

The following data elements are applicable only to the public rental housing and state owned and managed Indigenous housing data collections and are not included in the *National housing assistance data dictionary* version 2 or in this appendix. Some are derived from data dictionary definitions, as noted.

NMDS Variable	Description	Related NHADDv2 item
OCCS	Number of occupants in household	..
REBAMT	Rebate amount	..
HTYPE	Household type	..
TENCOMP	Tenancy composition	..
AGE_MT	Age of main tenant	Age
INCS_MT	Principal income source of main tenant	Income source
INCS_H	Principal income source of household	Income source

.. Not applicable.

Age

Admin. status: CURRENT
Reporting required: Required if 'Date of birth' not available
NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID: 000740 *Data item version number:* 1
Data element type: DATA ELEMENT
Definition: The age of the person in (completed) years.
Context: The data element Age is used in analyses of service utilisation by age group and comparisons with demographic statistics. Age is also used as an assistance eligibility criterion.

Relational and representational attributes

Datatype: Numeric *Representational form:* QUANTITATIVE VALUE
Field size: *Min.* 1 *Max.* 3 *Representational layout:* NNN
Data domain: Age in single years (if aged under one year, record as 000)
998 Relevant data not available from the jurisdiction
999 Unknown
Guide for use: If year of birth is known (but Date of birth is not) use the date 01/01 of the birth year to estimate age. If age (or Date of birth) is unknown or not stated, and cannot be estimated, use code 999.
Verification rules: Distributions should be checked to ensure that missing values are being recorded correctly, and not as zeros.
Collection methods: Although collection of Date of birth allows more precise calculation of age, this is not feasible in some data collections and alternative questions are:
Age last birthday?
What was [your] [the person's] age last birthday?
What is [your] [the person's] age in complete years?
Related data: Date of birth

Administrative attributes

National minimum data sets: Public rental housing

Community housing

State owned and managed Indigenous housing

Source documents: ABS 1995. Directory of concepts and standards for social, labour and demographic statistics

ABS 1996. 1996 Census Dictionary. ABS Cat. No. 2901.0

AIHW 1998. Data Standardisation Project for the development of a national unit record public housing data set

Home and Community Care Data Dictionary version 1

National Community Services Data Dictionary version 2

Source organisations: Australian Bureau of Statistics

Australian Institute of Health and Welfare

National Community Services Data Committee

Comments: In most community services data collections, age in years is often reported rather than derived from the data element Date of birth. However, 'Date of birth' is the preferred method for collection of Age data.

Date assistance commenced

Admin. status: CURRENT
Reporting required: Required
NHAI model location: Housing Event

Identifying and definitional attributes

Knowledgebase ID: 000706 *Data item version number:* 1

Data element type: DATA ELEMENT

Definition: The date on which the provision of assistance to a household by an agency commenced, as distinct from the date the household applies and is entered on the waiting list or assessed for eligibility.

Context: This data element is used in calculation of measures of periods of support and duration of assistance and for measuring various point-in-time data.

Relational and representational attributes

Datatype: Numeric *Representational form:* DATE

Field size: *Min.* 8 *Max.* 8 *Representational layout:* DDMMYYYY

Data domain: Valid date

Guide for use: The date recorded should be the date on which the client has begun to receive some form of assistance. This could be the provision of housing, a home loan, grants, advice or referral.

This data element should always be recorded as an 8-digit valid date comprising day, month and year. Year should always be recorded in its full 4 digit format. For days and months with a numeric value of less than 10, zeros should be used to ensure that the date contains the required 8 digits. For example, if a service episode starts on 1 July 2000, the Date assistance commenced should be recorded as 01072000.

Collection methods: Date assistance commenced must be related to a particular service episode. For each separate service episode a separate 'Date assistance commenced' should be recorded. Same address transfers, mutual exchanges and succession of tenancy of dwellings are not considered separate episodes of assistance.

It should also be related to a particular program type (e.g. public rental housing, home purchase assistance).

Public housing only: The date assistance commenced should be taken from the date specified on the tenancy agreement. Tenants may actually move in at a later date than this date.

Related data: Date assistance completed, Program type

Knowledgebase ID: 000707 *Data item version number:* 1
Data element type: DATA ELEMENT
Definition: The date on which provision of assistance by an agency was completed, ceased or terminated.
Context: This data element is used in calculation of measures of periods of support and duration of assistance and for measuring various point-in-time data.

Relational and representational attributes

Datatype: Numeric *Representational form:* DATE
Field size: *Min.* 8 *Max.* 8 *Representational layout:* DDMMYYYY
Data domain: Valid date
Guide for use: This data element should always be recorded as an 8-digit valid date comprising day, month and year. Year should always be recorded in its full 4 digit format. For days and months with a numeric value of less than 10, zeros should be used to ensure that the date contains the required 8 digits. For example, if a service episode is completed on 1 July 2002, the Date assistance completed should be recorded as 01072002.
Collection methods: Date assistance completed must be related to a particular service episode. For each separate service episode a separate 'Date assistance completed' should be recorded.
It should also be related to a particular program type (e.g. public rental housing, home purchase assistance).
Related data: Date assistance commenced, Program type

Disability household

Admin. status: CURRENT
Reporting required: Not required
NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID: *Data item version number:* 2

Data element type: DATA ELEMENT

Definition: A disability household is one that contains one or more household members with a disability.

Context: Identification of households who access housing assistance who may have special needs or difficulty accessing the private rental market. Households with a disability are included in the special needs category for performance reporting under the National Housing Data Agreement.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 1 *Representational layout:* N

Data domain:

- 1 Person/s with a disability present in household
- 2 No people with a disability present in household
- 9 Not stated/inadequately described

Guide for use: Generally this item will be self-enumerated and as such the person's view or the view of their carer should be recorded. In some cases proof of disability may be required to receive some form of assistance.

Collection methods: This data element should be used in conjunction with support required flag and support type.

Do you or any other household member have a disability or health condition that limits participation in activities (such as work, cooking, gardening, self care), or for which assistance is required, which has lasted or is likely to last for a period of six months or more?

Yes
No

Comments: In some jurisdictions, disability status is only recorded if the disability impacts on the client's housing need.

Dwelling

Admin. status: CURRENT
Reporting required: Not required
NHAI model location: Housing Resource

Identifying and definitional attributes

Knowledgebase ID: 000765 *Data item version number:* 1

Data element type: DATA CONCEPT

Definition: A structure or a discrete space within a structure intended for people to live in or where a person or group of people live. Thus a structure that people actually live in is a dwelling regardless of its intended purpose, but a vacant structure is only a dwelling if intended for human residence. A dwelling may include one or more rooms used as an office or workshop provided the dwelling is in residential use.

Context: Dwellings are the main counting unit in the housing sector. Dwellings are reported for a variety of purposes including number of untenable or tenable, and occupied or vacant dwellings. Dwellings may be owned and/or managed, and/or available for a use by a specific program, including headleased stock from private and government sources.

Relational and representational attributes

Datatype: .. *Representational form:* ..

Field size: *Min.* .. *Max.* .. *Representational layout:* ..

Data domain: ..

Guide for use: Certain operational rules are required to provide a consistent basis on which to determine whether accommodation within a particular structure, such as a granny flat, forms a separate dwelling. Discrete spaces within a single structure intended for people to live in are only identified as separate dwellings if they are self-contained. A self-contained unit has its own cooking, bathing and toilet facilities and can be accessed without passing through another dwelling (excluding communal entry halls, passages and lobbies).

For the CSHA data collections, the number of tenancy (rental) units is a practical proxy for counting the number of dwellings.

Dwelling structure

Admin. status: CURRENT
Reporting required: Not required
NHAI model location: Housing Resource

Identifying and definitional attributes

Knowledgebase ID: *Data item version number: 2*

Data element type: DATA ELEMENT

Definition: Describes the physical structure of the individual dwelling that a tenant occupies.

Context: Data on dwelling structure are used to monitor changes in housing characteristics, to help formulate housing policies and to review existing housing stock.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 2 *Representational layout:* NN

Data domain:

- 1 Separate house
- 2 Semi-detached, row or terrace house, townhouse, etc.
- 3 Flat or apartment
- 4 Caravan, tent, cabin, etc. in caravan park, houseboat in marina, etc.
- 5 Caravan not in caravan park, houseboat not in marina, etc.
- 6 Improvised home, campers out
- 7 House or flat attached to a shop, office, etc.
- 8 Boarding/rooming house room/unit
- 9 Other
- 10 Not stated/inadequately described

Guide for use:

- 1 **Separate house:** This is a house separated from other houses (or other buildings or structures) by space to allow access on all sides (at least half a metre). This category also includes houses that have an attached flat (e.g. a granny flat). The attached flat will be included in the 'Flat or apartment' category.
- 2 **Semi-detached, row or terrace house, townhouse, etc.:** This category covers dwellings with their own private grounds and no dwelling above or below. A key feature of these dwellings is that they are either attached in some structural way to one or more dwellings or are separated from neighbouring dwellings by less than half a metre. Examples include semi-detached, row or terrace houses, townhouses and villa units. Multi-storey townhouses or units are separately identified from those that are single-storey.

*Guide for use
continued:*

- 3 **Flat or apartment:** This category covers all dwellings in blocks of flats, units or apartments. These dwellings do not have their own private grounds and usually share a common entrance foyer or stairwell. This category includes houses converted into flats, and flats attached to houses such as granny flats.
- 4 **Caravan, tent, cabin, etc. in caravan park, houseboat in marina, etc.:** This category includes all types of accommodation within a caravan park. It also includes all occupied water craft in marinas.
- 5 **Caravan not in caravan park, houseboat not in marina, etc.:** This category includes all mobile units, on water or land, occupied on a permanent or semi-permanent basis by people (e.g. caravans, campervans, mobile houses, small boats, houseboats) that are not in caravan parks or marinas.
- 6 **Improvised home, campers out:** This category covers all structures not elsewhere classified that are occupied by people on a permanent or semi-permanent basis. This category typically includes garages, sheds, tents, shacks, etc. These structures are only included in this category if they are not in a caravan park.
- 7 **House or flat attached to a shop, office, etc.:** This category includes all houses or flats that are attached to a non-residential building. Examples of these dwellings are manses attached to a church, a flat or apartment over a shop, and a caretakers house or flat attached to a school, factory or storage facility.
- 8 **Boarding/rooming house room:** A boarding/rooming house room is usually a bedroom within a boarding house that is not self-contained, and usually shares a common kitchen and/or bathroom. Boarding house bedrooms are usually accessed via a common entrance such as a foyer or hallway. Please note: this structure type identifies the individual rooms in a boarding/rooming house, not the complete building.

Collection methods:

Related data: Boarding house room, Building function, Dwelling, Dwelling ID, Number of bedrooms, Tenancy (rental) unit

Dwelling tenantability status

Admin. status: CURRENT
Reporting required: Required
NHAI model location: Housing Resource

Identifying and definitional attributes

Knowledgebase ID: *Data item version number:* 1

Data element type: DATA ELEMENT

Definition: A tenantable dwelling is a dwelling for which maintenance has been completed and can be either occupied or unoccupied.

Context: Dwelling tenantability is related to the concept of tenant, with its associated rights and responsibilities. A tenantable dwelling usually provides a certain level of basic amenity, and maintenance is completed to the required minimum level. A dwelling that is occupied but not tenantable indicates an unmet housing need.

This information is collected in the CSHA annual data collections for public housing, community housing and state owned and managed Indigenous housing.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Greatest need status

Admin. status: CURRENT

Reporting required: Required

NHAI Model Location: Party

Identifying and definitional attributes

Knowledgebase ID:

Data item version number: 2

Data element type: DATA ELEMENT

Definition: Low income households that at the time of allocation were subject to one or more of the following circumstances:

- they were homeless; or
- their life or safety was at risk in their accommodation; or
- their health condition was aggravated by their housing; or
- their housing was inappropriate to their needs; or
- they had very high rental housing costs.

Context: This item is used to measure the CSHA ' Priority access to those in greatest need' (P6) national standard. The purpose of this indicator is to measure the effectiveness of housing authorities' allocation of housing to households in greatest need ahead of households with less housing needs.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 1 *Representational layout:* N

Data domain:

- 1 Household in greatest need
- 2 Household not in greatest need
- 9 Not stated/inadequately described

Guide for use:

A low income household for the CSHA greatest need definition is a household who satisfies an eligibility test to receive CSHA funded program assistance.

1 Homeless

Note – the definition of ‘homeless’ used in this item is the same as that which appears at ‘Homeless status – CSHA’ in the data dictionary.

2 People whose life or safety was at risk in their accommodation

This includes situations where people were:

- subject to domestic violence; or
- subject to sexual/emotional abuse; or
- subject to child abuse; or
- at risk of violence or who feared for their safety in the home environment.

Violence is defined as any incident involving the occurrence, attempt or threat of either physical or sexual assault. Physical assault involves the use of physical force with the intent to harm or frighten a person. The threat to harm should only be included if it is believed the harm is likely to be carried out. Sexual assault includes acts of a sexual nature against a person’s will through the use of physical force, intimidation or coercion, or any attempts to do this.

3 People whose health condition was aggravated by their accommodation

It includes people who lived in the following situations:

- medical condition or disability which rendered their housing unsuitable (e.g. disabled person who required modified accommodation, elderly persons who were housebound due to mobility problems in highset dwellings);
- appropriate housing stock was either not available, or not available at an affordable cost, in the private rental market (e.g. dwellings with appropriate modifications for a person with a disability);
- a health condition or disability which was caused or exacerbated by the living situation.

4 People whose housing was inappropriate to their needs

This category captures housing situations that indicate a person did not have access to safe and secure housing at the time of allocation and these situations are not included in categories 1 to 3 above (people with housing affordability issues are captured in category 5). Inappropriate housing includes persons who:

- lived in poor housing locations that resulted in isolation from community services, social networks and support systems, and these services and supports were necessary to maintain independent living. This category includes families that were divided due to their housing situation; or

- lived in overcrowded situations where an additional two bedrooms was required for adequate housing according to the proxy occupancy standard; or
- were unable to access accommodation in the private rental market due to discrimination. Discrimination refers to a person who was treated unfairly because they belonged to a particular group of people. Types of discrimination include: sex; race; age; marital status; sexual orientation; or disability (Anti-discrimination Board); or
- lived in situations where their tenure was insecure and they had received an eviction notice (either written or verbal) and they had no access to adequate legislative protection; or
- lived in housing that had severe structural or other maintenance problems (e.g. property had been declared unfit for human habitation, severe dampness, lacked essential facilities such as cooking or bathroom).

5 People with very high rental costs

This category identifies households that paid 41% or more of their income in rent at the time of housing allocation.

This definition is not intended to suggest that households paying between 30–41% of income on rent live in affordable housing situations. The definition aims to capture the group of the population who experience the more severe end of housing affordability problems and the group for which literature suggests are least able to decrease their housing costs (Department of Family and Community Services 2001:63).

Collection methods: The ‘greatest need’ circumstances identified in the national standard are not exclusive. That is, household may be counted in more than one ‘greatest need’ category. Each household should only be counted once, regardless of how many ‘greatest need’ circumstances they meet or how many members of the household have a greatest need.

Household

Admin. status: CURRENT

Reporting required: Required

NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID: 000750

Data item version number: 1

Data element type: DATA CONCEPT

Definition: A group of two or more related or unrelated people who usually reside in the same dwelling, and who make common provision for food or other essentials for living. Or a person living in a dwelling who makes provision for his or her own food and other essentials for living, without combining with any other person.

Context: Together with family, household is considered one of the basic groups of social aggregation. Information on household numbers and composition aids in identifying groups within the population such as Indigenous households or the number of people living alone.

Relational and representational attributes

Datatype: .. *Representational form:* ..

Field size: Min. . . Max. . . *Representational layout:* ..

Guide for use: For the CSHA data collections, the number of tenancy agreements is a practical proxy for calculating the number of households receiving housing assistance.

The persons in the group may pool their incomes and have a common budget to a greater or lesser extent; they may be related or unrelated persons, or a combination of both.

Only usual residents of the household are included as members of the household. Visitors to a household are, by definition, excluded from the household.

Related data: Household composition, Indigenous household, Tenancy agreement

Household ID

Admin. status: CURRENT

Reporting required: Required

NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID:

Data item version number: 2

Data element type: DATA ELEMENT

Definition: A unique identifier (within a state or territory) assigned to a household that is either seeking and/or receiving assistance.

Context: Households are one of the main counting units in housing assistance data and as such it is essential to be able to uniquely identify them.

Relational and representational attributes

Datatype: Alphanumeric *Representational form:* n.a.

Field size: *Min. n.a. Max. n.a. Representational layout:* n.a.

Data domain: Each jurisdiction to devise

Guide for use:

Collection methods: Preferably agencies should allocate a unique identifier to a household when they are placed on the waiting list, and this ID should then remain when/if they receive assistance. This enables the matching of waitlist data with assistance data.

A household for the purposes of the data element is the same as the members under a single tenancy agreement.

Income—assessable

Admin. status: CURRENT
Reporting required: Not required
NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID: 000688 *Data item version number:* 1
Data element type: DATA ELEMENT
Definition: The value of total income from all assessable sources. The assessable sources are those specified and used by the agency to establish eligibility for receipt of housing assistance.
Context: Assessable income is also used to calculate the rental housing rebate that allows the household to pay a rent lower than the market rent. Each state and territory uses its own definition of 'assessable income'.

Relational and representational attributes

Datatype: Numeric *Representational form:* QUANTITATIVE VALUE
Field size: *Min.* 8 *Max.* 8 *Representational layout:* \$\$\$, \$\$\$.*cc*
Data domain: Dollar and cent value
Guide for use: The main components of assessable income are:

- current usual wages and salary
- income derived from self-employment
- government pensions, benefits and allowances
- other income-comprising investments (including interest, dividends, royalties and rent) and other regular income (including superannuation, private scholarships received in cash, workers' compensation, accident compensation, maintenance or alimony, and any other allowances regularly received).

Always include the cent value, using .00 where there are only dollar values.

Collection methods:

Administrative attributes

National minimum data sets: Public rental housing

Community housing

State owned and managed Indigenous housing

Source documents: CSHA public rental housing data manual 2001–02

National Housing Assistance Data Dictionary version 1

Source organisation: Australian Institute of Health and Welfare

Comments: The main income source of the person is the income source by which the person derives most (equal to or greater than 50%) of his/her income. If a person has multiple sources of income and none are equal to or greater than 50%, the one that contributes the largest percentage should be counted.

To determine main income source for the household: If a household has multiple sources of income and none are equal to or greater than 50%, sum the value of the income amount for all household members for each income source. The income source that contributes the largest percentage should be counted as the main income source for the household.

Income unit

Admin. status: CURRENT
Reporting required: Not required
NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID: 000754 *Data item version number:* 1

Data element type: DATA CONCEPT

Definition: One person or a group of related persons within a household whose command over income is shared, or any person living in a non-private dwelling who is in receipt of personal income.

Context: Income units are restricted to relationships of marriage (registered or de facto) and of parent/dependent child who usually resides in the same household. This means that an income unit can be defined as:

- a married couple, or sole parent, and dependent children only
- a married couple only with no dependent children present
- a person who is not related to any other household member either by marriage or by the parent/dependent child relationship.

This is the standard statistical unit for analyses of economic wellbeing, and can be an important measure in assessing the needs and circumstances of individuals and families.

Identifying and definitional attributes

Knowledgebase ID: 000692

Data item version number: 1

Data element type: DATA ELEMENT

Definition: An Indigenous household is one that contains one or more Indigenous people.

This definition may not be consistent with eligibility requirements for assistance targeted to Indigenous people under a specific program. For example, some programs specify that there must be an Indigenous person aged 15 or over to be classified as an Indigenous household.

Context: Together with 'family', household is considered one of the basic groups of social aggregation. Information on household numbers and composition aids in identifying groups within the population such as Indigenous households or the number of people living alone.

Australia's Aboriginal and Torres Strait Islander peoples occupy a unique place in Australian society and culture. In the current climate of reconciliation, accurate and consistent statistics about Aboriginal and Torres Strait Islander peoples are needed in order to plan, promote and deliver essential services, to monitor changes in wellbeing and to account for government expenditure in this area.

Indigenous status

Admin. status: CURRENT

Reporting required: Required

NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID:

Data item version number: 1

Data element type: DATA ELEMENT

Definition: Indigenous status is a measure of whether a person identifies as being of Aboriginal or Torres Strait Islander origin. This is in accord with the first two of three components of the Commonwealth definition. See 'Comments' for the Commonwealth definition.

Context: Australia's Aboriginal and Torres Strait Islander peoples occupy a unique place in Australian society and culture. In the current climate of reconciliation, accurate and consistent statistics about Aboriginal and Torres Strait Islander peoples are needed in order to plan, promote and deliver essential services, to monitor changes in wellbeing and to account for government expenditure in this area. The purpose of this data element is to provide information about people who identify as being of Aboriginal or Torres Strait Islander origin. Agencies or establishments wishing to determine the eligibility of individuals for particular benefits, services or rights will need to make their own judgements about the suitability of the standard measure for these purposes, having regard to the specific eligibility criteria for the program concerned.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 2 *Representational layout:* NN

Data domain:

- 1 Indigenous (not further defined)
 - 1.1 Aboriginal but not Torres Strait Islander origin
 - 1.2 Torres Strait Islander but not Aboriginal origin
 - 1.3 Both Aboriginal and Torres Strait Islander origin
- 2 Neither Aboriginal or Torres Strait Islander origin
- 9 Not stated/inadequately described

Guide for use:

This data element is based on the ABS Standard for Indigenous status. For detailed advice on its use and application please refer to the ABS web site as indicated below under 'Source document'.

The classification for 'Indigenous status' has a hierarchical structure comprising two levels. There are four categories at the detailed level of the classification, which are grouped into two categories at the broad level. There is one supplementary category for 'not stated' responses. The classification is as follows:

Indigenous:

- Aboriginal but not Torres Strait Islander origin
- Torres Strait Islander but not Aboriginal origin
- Both Aboriginal and Torres Strait Islander origin

Non-Indigenous:

- Neither Aboriginal nor Torres Strait Islander origin

Not stated/inadequately described:

The not stated/inadequately described category is not to be available as a valid answer to the questions but is intended for use:

- primarily when importing data from other data collections that do not contain mappable data;
- where an answer was refused;
- where the question was not able to be asked prior to completion of assistance because the client was unable to communicate or a person who knows the client was not available.

Only in the last three situations may the tick boxes on the questionnaire be left blank.

Collection methods:

The standard question for Indigenous status is as follows:

[Are you] [Is the person] [Is (name)] of Aboriginal or Torres Strait Islander origin?

(For persons of both Aboriginal and Torres Strait Islander origin, mark both 'Yes' boxes.)

- | | |
|-----------------------------|--------------------------|
| No | <input type="checkbox"/> |
| Yes, Aboriginal | <input type="checkbox"/> |
| Yes, Torres Strait Islander | <input type="checkbox"/> |

This question is recommended for self-enumerated or interview-based collections. It can also be used in circumstances where a close relative, friend, or another member of the household is answering on behalf of the subject.

When someone is not present, the person answering for them should be in a position to do so, i.e. this person must know the person about whom the question is being asked well and feel confident to provide accurate information about them. However, it is strongly recommended that this question be asked directly wherever possible.

This question must always be asked regardless of data collectors' perceptions based on appearance or other factors.

The Indigenous status question allows for more than one response. The procedure for coding multiple responses is as follows:

- If the respondent marks 'No' and either 'Aboriginal' or 'Torres Strait Islander', then the response should be coded to either Aboriginal or Torres Strait Islander as indicated (i.e. disregard the 'No' response).
- If the respondent marks both the 'Aboriginal' and 'Torres Strait Islander' boxes, then their response should be coded to 'Both Aboriginal and Torres Strait Islander origin'.
- If the respondent marks all three boxes ('No', 'Aboriginal' and 'Torres Strait Islander'), then the response should be coded to 'Both Aboriginal and Torres Strait Islander origin' (i.e. disregard the 'No' response).

This approach may be problematical in some data collections, for example, when data are collected by interview or using screen-based data capture systems. An additional response category may be included if this better suits the data collection practices of the agency or establishment concerned:

Yes, both Aboriginal and Torres Strait Islander

There has been some controversy over the issue of whether South Sea Islanders need to be included in the definition of Aboriginal or Torres Strait Islander. The ABS clearly states that South Sea Islanders are not Indigenous and should therefore be coded accordingly. Subsequently, South Sea Islanders are to be coded under category 2 'Neither Aboriginal or Torres Strait Islander origin'.

Related data: Household, Indigenous community acceptance, Indigenous household, supersedes the data element Indigenous status in the NHADDv1

Administrative attributes

National minimum data sets: Public rental housing
Community housing
State owned and managed Indigenous housing
Crisis Accommodation Program
Home purchase assistance
Private rent assistance

Source document: Available on the ABS web site <www.abs.gov.au>

Source organisation: Australian Bureau of Statistics

Comments: Some service providers may find it difficult to ask a question about a person's Indigenous status. Furthermore, some Indigenous persons may be reluctant to answer a question about their Indigenous status because previous experience has led them to believe that identifying as an Indigenous person may disadvantage them. Without assistance with implementing this data element, the data provided are likely to be of low validity and reliability.

Presently, the CSHA data collections do not differentiate between Aboriginal and Torres Strait Islander origin. Commonly, the question asked is 'Does the person (client) identify themselves as an Aboriginal or Torres Strait Islander?' and the possible responses are Yes/No/Not known.

This does not conform with the ABS national standard, which incorporates the more detailed data domains of:

- 1 Aboriginal but not Torres Strait Islander origin
- 2 Torres Strait Islander but not Aboriginal origin
- 3 Both Aboriginal and Torres Strait Islander origin
- 4 Neither Aboriginal nor Torres Strait Islander origin
- 9 Not stated/inadequately described.

It is also not possible to map the CSHA response of 'Indigenous—not further defined' to the ABS standard.

The following definition, commonly known as 'The Commonwealth Definition' was given in a High Court judgement in the case of *Commonwealth v Tasmania* (1983) 46 ALR 625:

'An Aboriginal or Torres Strait Islander is a person of Aboriginal or Torres Strait Islander descent who identifies as an Aboriginal or Torres Strait Islander and is accepted as such by the community in which he or she lives.'

There are three components to the Commonwealth definition:

- descent
- self-identification
- community acceptance.

In practice, it is not feasible to collect information on the community acceptance part of this definition in general-purpose statistical and administrative collections and therefore standard questions on Indigenous status relate to descent and self-identification only.

Market rent value of dwelling

Admin. status: CURRENT
Reporting required: Required
NHAI model location: Environment

Identifying and definitional attributes

Knowledgebase ID: 000722 *Data item version number:* 1
Data element type: DATA ELEMENT
Definition: The rent that would be charged for a dwelling in the private rental market.
Context: Necessary for measuring affordability of housing.

Relational and representational attributes

Datatype: Numeric *Representational form:* QUANTITATIVE VALUE
Field size: *Min.* 8 *Max.* 8 *Representational layout:* \$\$\$, \$\$\$.*cc*
Data domain: Dollar and cent value
Guide for use: Always include the cent value, using .00 where there are only dollar values.
Collection methods: The optimum method of assigning a market rent value to a dwelling is to have it assessed by the Australian Valuation Office (or another independent valuer). Preferably each dwelling should be re-assessed every two years as market rent values can change substantially over time. In some larger jurisdictions a sample of houses are periodically assessed for their market rent value as it is not practical to assess every dwelling.
Market rent is typically recorded on a weekly basis, and for the national CSHA data collection is recorded as market rent value for which a rent was charged for the week of 30 June.
Related data: Rebated household (flag), Rent charged to tenant, Rental subsidy (amount)

Administrative attributes

National minimum data sets: Public rental housing
Community housing
State owned and managed Indigenous housing
Source document: National Housing Assistance Data Dictionary version 1
Source organisation: Australian Institute of Health and Welfare
Comments: Guidelines should be developed for assessing the market rent of modified dwellings (as for disabled and frail aged people) and dwellings in remote areas where there is not usually a private rental market. One option could be to calculate the cost of replacing the dwelling, then using a percentage of that as the market rent. However, in remote areas where building costs can be high, this method could lead to inappropriately high market rents.

New allocation status

Admin. status: CURRENT

Reporting required: Required

NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID: *Data item version number:* 1

Data element type: DATA ELEMENT

Definition: Whether the household was a new allocation for housing assistance in the financial year.

Context: Used to determine the number of new households that received CSHA-funded housing assistance in the financial year.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 1 *Representational layout:* N

Data domain:

- 1 Newly allocated in the financial year
- 2 Not newly allocated in the financial year
- 9 Not stated/inadequately described

Guide for use:

Collection methods: New allocation status should be related to a particular program type (e.g. public rental housing, home purchase assistance).

Related data: Date assistance commenced, Waitlist applicant type

Administrative attributes

Rebated household (flag)

Admin. status: CURRENT

Reporting required: Required

NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID: 000726

Data item version number: 1

Data element type: DATA ELEMENT

Definition: A household receiving housing assistance (usually via a state or territory or community housing organisation) who, as part of the assistance, pays less than the market rent value of the dwelling.

This data element is only relevant to those people who are provided a dwelling as part of their assistance. It does not include those households that only receive monetary assistance to help them rent in the private market (rent assistance) or to help them purchase a home or equity in it (home purchase assistance).

For example, a public housing dwelling may be assessed as having a market rent value of \$200 per week. On assessing the applicant household though, the state housing authority calculates that this household should pay no more than \$100 per week on rent. If this household is then allocated to this dwelling with a rent of \$100 (while the market rent value is \$200), then the household is considered to be rebated.

Context:

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 1 *Representational layout:* N

Data domain:

1	Rebated
2	Not rebated
9	Not stated/inadequately described

Guide for use:

Collection methods: For those jurisdictions who use a 'full rent' concept, a rebated household is one which pays less than full rent.

Reference person

Admin. status: CURRENT

Reporting required: Required

NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID:

Data item version number: 2

Data element type: DERIVED DATA ELEMENT

Definition: Reference person refers to the first person listed on the housing assistance application/tenancy form or the mortgage papers.

Context: The ability to determine relationships between persons residing within the same household is essential in a wide range of statistics on household composition, family type and income unit. It is essential for calculating many of the performance indicators, such as 'Low-income status' and 'Affordability'. It may also be useful in determining possible levels of need and support available for clients.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 1 *Representational layout:* N

Data domain:

- 1 Reference person for household
- 2 Not the reference person for household
- 9 Not stated/inadequately described

Guide for use:

Collection methods: Usually referred to as 'Person 1', 'Main tenant' or 'Tenant 1' on application or tenancy forms. Can also be referred to as the 'Principal tenant', 'Household head' or, where the dwelling is being purchased, the 'Mortgagee'. Also includes single adults and lone parents. Person must be aged 16 or over.

All other persons should be coded to 2.

NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID:

Data item version number: 2

Data element type: DATA ELEMENT

Definition: The familial and non-familial relationship of each person in a given household to the reference person in that same household.

Context: The ability to determine relationships between persons residing within the same household is essential in a wide range of statistics on household composition, family type and income unit. It is essential for calculating many of the performance indicators, such as 'Low-income status' and 'Affordability'. It may also be useful in determining possible levels of need and support available for clients.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 1 *Representational layout:* N

Data domain:

- 1 Reference person/tenant
- 2 Spouse/partner
- 3 Son/daughter aged under 16 years
- 4 Son/daughter aged 16 years and over
- 5 Resident aged under 16 years
- 6 Resident aged 16 years and over
- 9 Not stated/inadequately described

Guide for use: Reference person: Referred to as 'person 1', 'Main tenant' or 'tenant 1' on application or tenancy forms. Can also be referred to as the 'Principal tenant', 'Household head' or where the dwelling is being purchased, referred to as the 'Mortgagee'. Also includes single adults and lone parents. Person must be aged 16 or over.

Spouse/partner: includes de facto, wife, husband and partner of the reference person/tenant.

Son/daughter: includes the son(s) or daughter(s) (or stepson/daughter) of the reference person and/or spouse.

Resident: includes relatives other than son/daughter (stepson/daughter), non-related carer, and other non-related and non-family members.

Collection methods: Collecting this data is quite complex, due to inter-relationships that may exist in a household. Refer to ABS: Directory of concepts and standards for social, labour and demographic statistics, 1995, for standard questions and approaches to collecting data on this item.

Sex

Admin. status: CURRENT

Reporting required: Required

NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID: 000763

Data item version number: 1

Data element type: DATA ELEMENT

Definition: The sex of the person.

The term 'sex' refers to the biological differences between males and females.

Context: Demographic detail and service planning.

Required for analysis of service utilisation, and need for services.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 1 *Representational layout:* N

Data domain:

- 1 Male
- 2 Female
- 9 Not stated/inadequately described

Guide for use: Where uncertainty exists about the sex of the person (e.g. for transvestites or transsexuals) the gender to be recorded is to be based on the gender nominated by the person themselves or on the observations/judgement of the interviewer. Although this may lead to some error, it is considered preferable to any offence that may be caused by a question that suggests that there is some doubt about the person's gender or sexuality.

Coding option 9 should only be used when the person has not provided this information upon request and/or the service provider is unable to make an informed judgement about the person's gender.

Collection methods: It is suggested that the following format be used for data collection:

What is your [the person's] sex?

Male

Female

Information collection for transsexuals and people with transgender issues should be based on the gender nominated by the person themselves.

Special needs status

Admin. status: CURRENT

Reporting required: Required

NHAI model location: Party

Identifying and definitional attributes

Knowledgebase ID:

Data item version number: 2

Data element type: DERIVED DATA ELEMENT

Definition: Low-income households:

- that satisfy the Indigenous household definition
- that have a household member with a disability
- where the principal tenant is aged 24 years or under
- where the principal tenant is aged 75 years or over.

Context: This item is used in the CSHA 'special needs' national performance indicator (P5) which aims to capture groups in the population that experience specific difficulties accessing the private rental market. It is recognised that not all households falling into this standard would necessarily have a special housing need.

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 1 *Representational layout:* N

Data domain:

1	Special needs
2	Not special needs
9	Not stated/inadequately described

Guide for use: A low-income household for the CSHA special needs definition is a household who satisfies an eligibility test to receive CSHA-funded program assistance.

1 Indigenous household: defined in this data dictionary under 'Indigenous household'.

For state/territory owned and managed Indigenous housing the category 'Indigenous household' will not be included in the CSHA special need standard as this program is targeted to Indigenous Australians.

2 Person with a disability: defined in this data dictionary under 'Disability Grouping — International' which defines four broad groups of disability: physical/diverse; intellectual/learning; psychiatric and sensory/speech disability.

3 Principal tenant aged 24 years or under: the principal tenant is defined as the person or principal person whose name appears on the tenancy agreement. It is usually the same as the 'reference person', which is defined in this data dictionary.

4 Principal tenant aged 75 years or more: the principal tenant is defined as the person or principal person whose name appears on the tenancy agreement. It is usually the same as the 'reference person', which is defined in this data dictionary.

For State and Territory Owned and Managed Indigenous Housing, the category 'where principal tenant is aged 75 years or more' is replaced with 'where the principal tenant is aged 50 years or more'. This age is selected as it is consistent with that used by the Commonwealth Department of Health and Ageing for planning the provision of aged-care services. It acknowledges that the need for aged care may begin at younger ages for Indigenous people than for their non-Indigenous counterparts due to the reduced life expectancy of Indigenous people and the higher burden of illness.

Collection methods: The special needs categories identified in the national standard are not exclusive; that is, a household may be counted in more than one special need category. Each household should only be counted once, regardless of how many special need categories they meet or how many members of the household have a special need.

Identifying and definitional attributes

Knowledgebase ID:

Data item version number: 1

Data element type: DATA ELEMENT

Definition: Whether an applicant/household has relocated from one dwelling to another dwelling within the same housing program during the financial year.

Context: Transfers may be the result of a need for more appropriate housing or due to a change in the personal circumstances of the applicant/household that necessitates a change in the assistance received (e.g. the need for a modified dwelling due to an illness or disability).

Relational and representational attributes

Datatype: Numeric *Representational form:* CODE

Field size: *Min.* 1 *Max.* 1 *Representational layout:* N

Data domain:

- 1 Transfer applicant/household
- 2 Not transfer applicant/household
- 9 Not stated/inadequately described

Guide for use:
